

BEAUTIFUL POWER OF WATER

A Fluidmaster Family Brand

A GLOBAL FAMILY OF BRANDS

The Fluidmaster company is a global supplier of comprehensive sanitary solutions, selling its products under the brands Fluidmaster®, LIV®, SCHWAB® in WISA®.

The tremendous success of Fluidmaster is based on our persistent focus on customer satisfaction and innovation in all areas of our operations.

We believe that this focused and strategic approach is the best way to expand our presence on the market and to support our manufacturing, distribution and business partners around the world.

By implementing synergies and a strong background of all companies of the Fluidmaster Corporation, we now offer the entire range of high-quality concealed and exposed flushing cisterns, smart sanitary solutions, flushing plates and non-contact flushing systems, frames for urinals, washbasins and bidets, shower drains and traps, sanitary ceramics, toilet seats, fill and flush valves and many accessories designed for different needs in bathrooms or sanitary environments.

We invite you to discover the world of innovative solutions.

FAMILY OF BRANDS

ISA®

SCHWAB

Fluidmaster Slovenia's beginnings date back to 1954, when LIV was established in Postojna. Initially, the main activities were smelting and metal processing. The production later expanded to the production of valves and traps, in 1970 to exposed and later to concealed flushing cisterns.

Ownership has changed several times over the years, but the real impetus was given to the company when it was taken over by the American corporation Fluidmaster, known worldwide for its fill and flush valves. In former LIV they found the right partner for entering the European market and the results of recent years show that they made the right decision, as sales are growing from year to year.

Under the auspices of Fluidmaster Slovenia, we sell our products in more than 20 markets under the LIV, Schwab, Wisa and Fluidmaster brands.

The key to our success is the cooperation of several target audiences – the end user and his user experience, sales staff and architects who design the bathroom and advise the appropriate elements, and installers who install the selected elements.

We successfully incorporate the knowledge and experience gained into the further development of our products, with a strong emphasis on usability, durability, technical and design perfection and economy in the use of drinking water.

TIME REVIEW

The use of modern technologies – automation, digitisation and robotics – has significantly accelerated our business processes and made them more efficient. But even though it has transformed jobs in our companies, employees are still the main driver of development, progress and competitiveness.

Pictured:

Fully automated production of the HDV fill valve, which is installed in most of our exposed and concealed cisterns.

P R I D E

A scenic view of a forest stream with mossy rocks and a waterfall in the background. The water is clear and greenish, reflecting the surrounding lush greenery. The rocks are covered in moss and are scattered throughout the stream. The background shows a dense forest with a waterfall cascading down a rocky ledge.

Water is the source of life and our inspiration. We are aware that clean water resources are not inexhaustible, so as an environmentally responsible company, we promote a responsible attitude towards water and its economical use.

Fluidmaster flushing cisterns and flushing plates offer the possibility of small and large flushes; with a dual flush system, a household of four can save up to 40,000 litres of drinking water per year!

W A T E R

C O M P R E H E N S I V E S A

Modern bathrooms go beyond the basic concept of a space dedicated to hygiene, and are increasingly becoming a space of relaxation and well-being. The possibilities for designing bathrooms are endless with the ever-increasing amount of products available, so everyone can arrange this space in accordance with their needs and desires.

At Fluidmaster, we are successfully incorporating these guidelines into the development of the sanitary technology. Highly functional products are distinguished by sophisticated and elegant design, quality materials and easy installation. Below we present some of our innovative solutions and for sure there will be at least one that you would be more than happy to install in your own bathroom.

NITARY SOLUTIONS

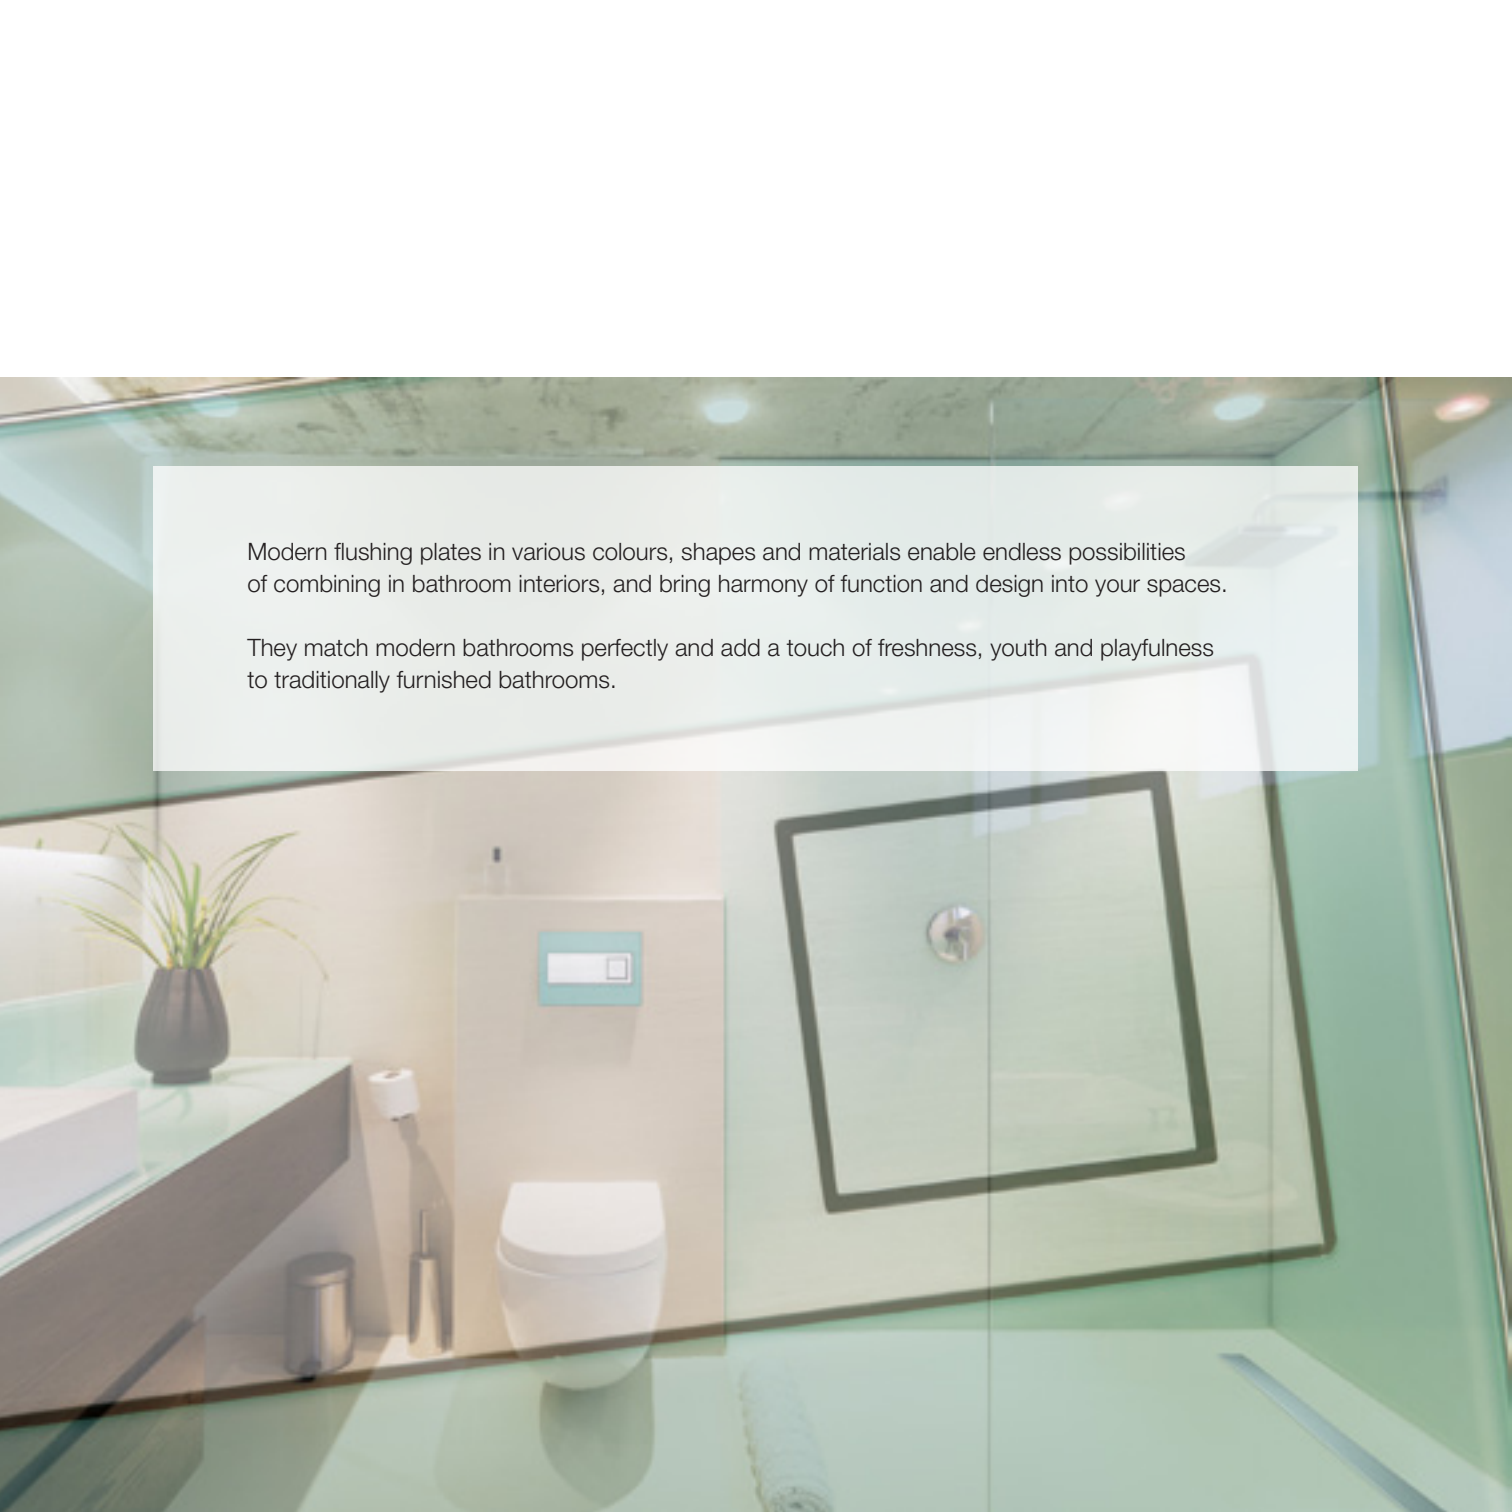

The VarioTronic, electronically height-adjustable pre-wall system, is a product of the future – useful, adapted to users and their special needs, and superbly designed.

With the help of the remote control, the height of the toilet bowl can be easily adjusted so that it can be used by small children who are just getting used to going to the toilet by themselves, or by the elderly and the physically handicapped.

To operate the VarioTronic system, you can choose mechanical, pneumatic or electronic flushing plates that are aesthetically designed, and easy to use and install.

I N N O V A T I O N

Modern flushing plates in various colours, shapes and materials enable endless possibilities of combining in bathroom interiors, and bring harmony of function and design into your spaces.

They match modern bathrooms perfectly and add a touch of freshness, youth and playfulness to traditionally furnished bathrooms.

H O M E

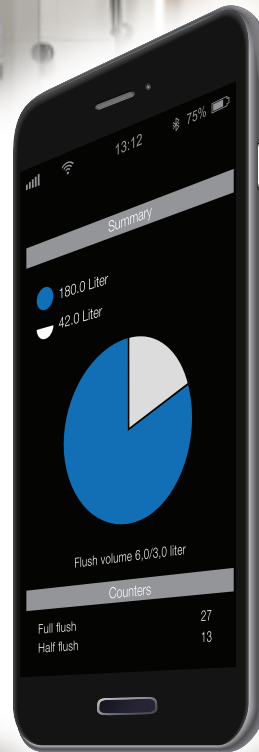

With the special SCHWAB Tronic App for your mobile phone or tablet, you can easily change the settings on the NEA and KATION activating plates or buttons.

You can influence flushing intervals, exposure colours, set PIN and different power options, look at statistics and system diagnostics.

C O M F O R T

A blue metal frame is positioned to hold a white flushing cistern. The cistern has a prominent yellow rectangular cover on its front. The frame has two small white labels with black arrows pointing upwards and the number '1m' below them. The background is a modern bathroom with a white sink, a wooden countertop, and a stone wall. A white towel is rolled up on the counter.

Concealed systems from the Fluidmaster family are an excellent choice for bathroom and sanitary equipment. Modern, technologically sophisticated, reliable, economical and almost inaudible flushing cisterns guarantee trouble free operation and are invisible in the room.

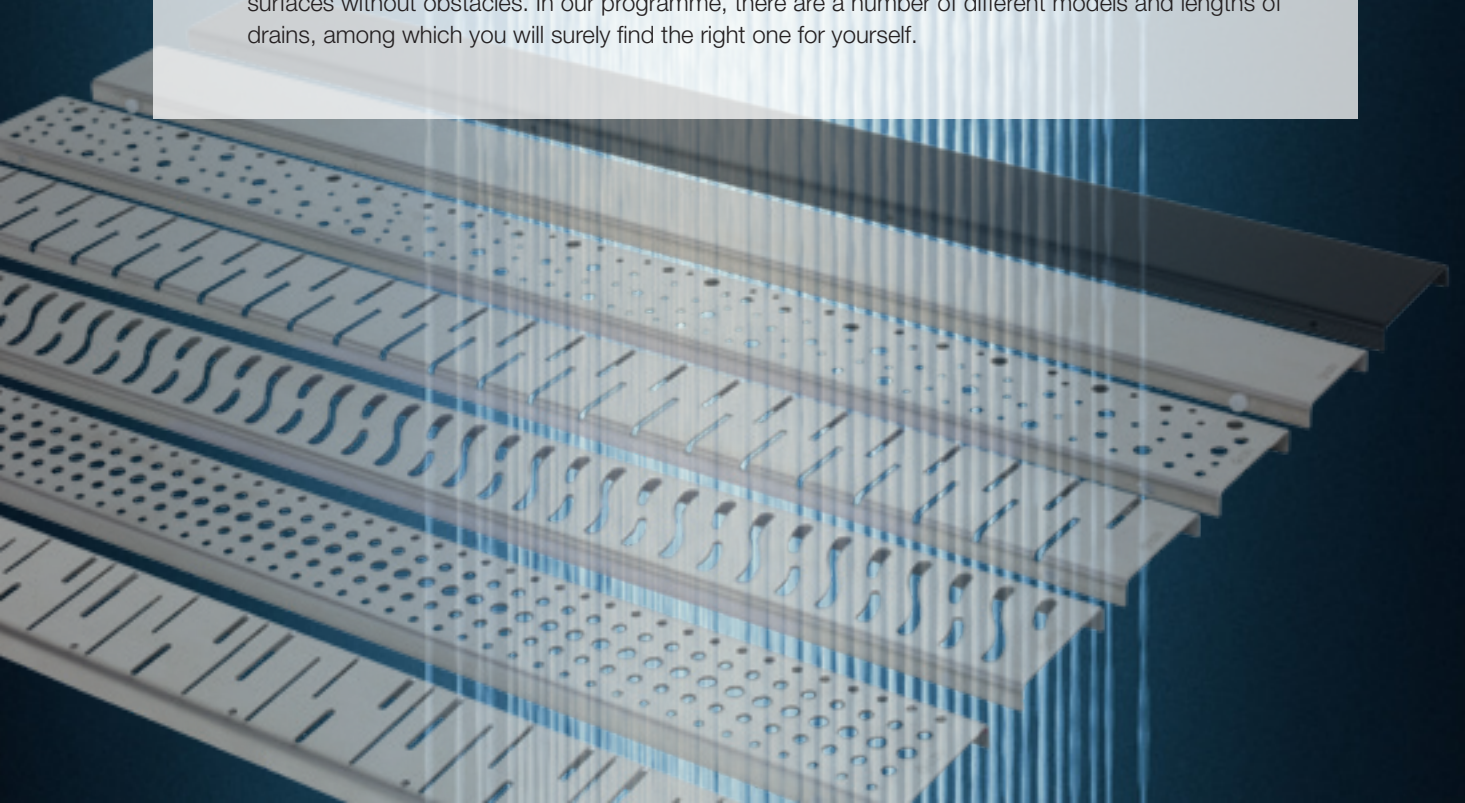

A wide selection of flushing cisterns for different purposes allows for a variety of layouts, and with a wide range of flushing plates at your disposal, they ensure aesthetic compatibility with virtually any interior.

P E R F E C T I O N

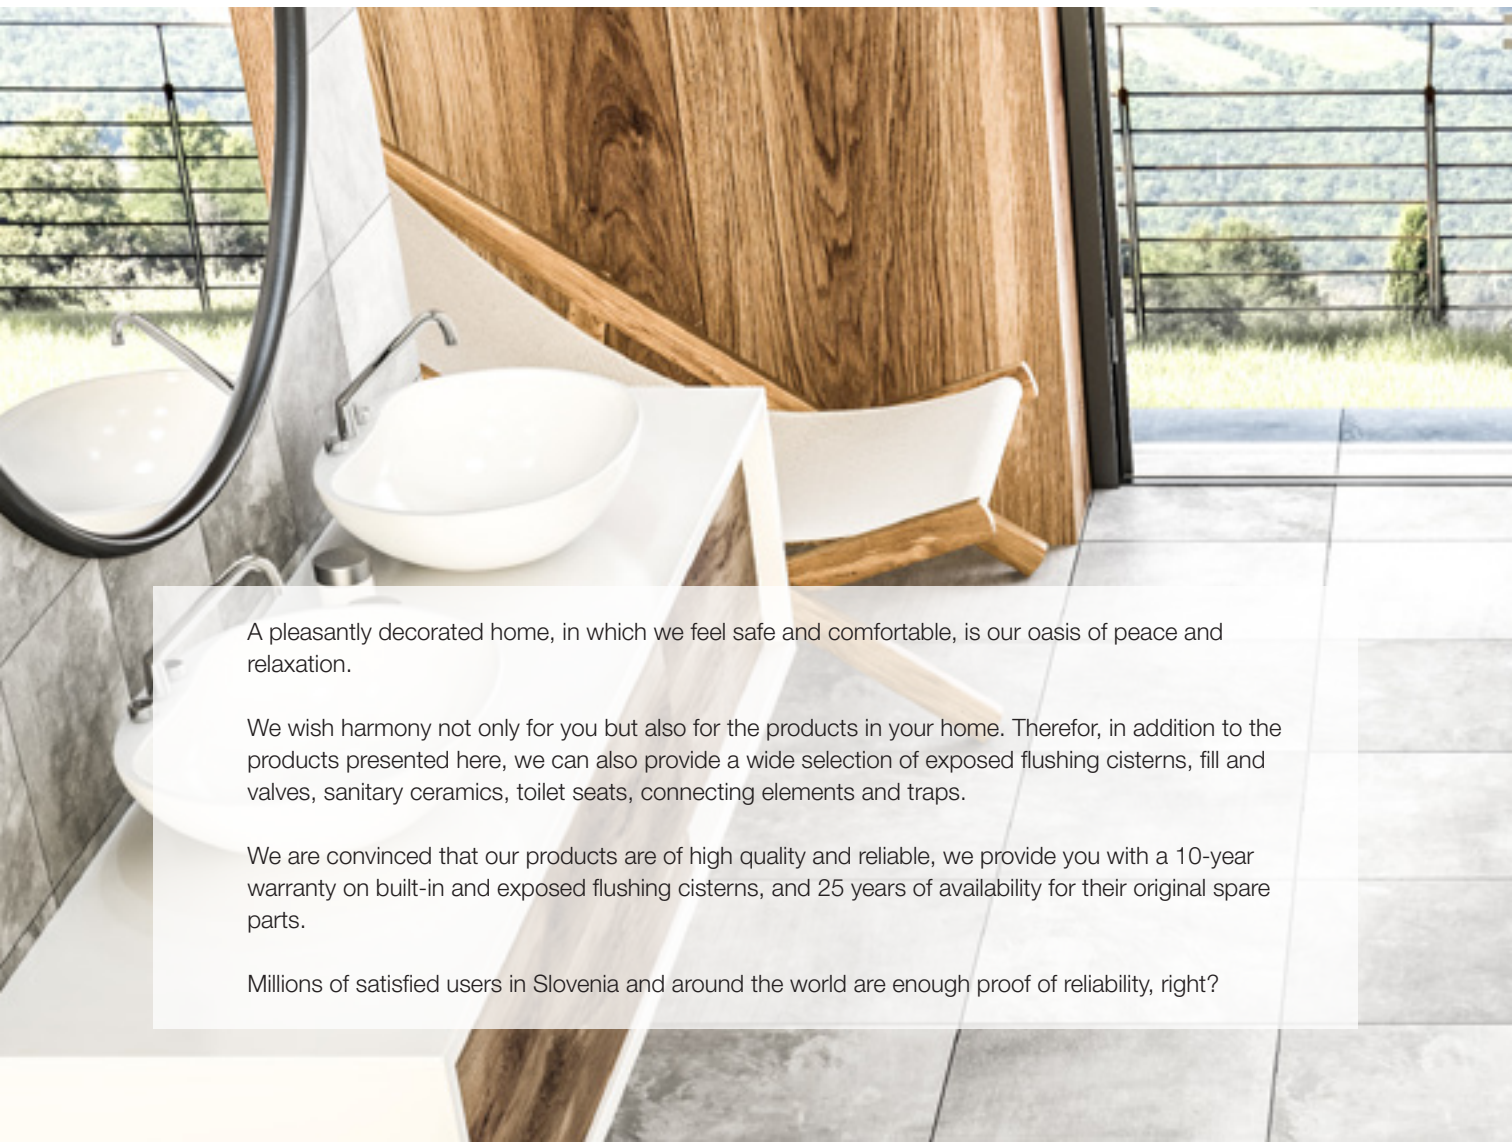

Shower drains act as additional equipment for the modern interior of bathrooms, saunas and relaxation rooms, where aesthetic and technical requirements dictate the choice of highly functional and flexible products.

The main advantages of shower drains are easy installation, maintenance and the possibility of using surfaces without obstacles. In our programme, there are a number of different models and lengths of drains, among which you will surely find the right one for yourself.

A E S T H E T I C S

A pleasantly decorated home, in which we feel safe and comfortable, is our oasis of peace and relaxation.

We wish harmony not only for you but also for the products in your home. Therefore, in addition to the products presented here, we can also provide a wide selection of exposed flushing cisterns, fill and valves, sanitary ceramics, toilet seats, connecting elements and traps.

We are convinced that our products are of high quality and reliable, we provide you with a 10-year warranty on built-in and exposed flushing cisterns, and 25 years of availability for their original spare parts.

Millions of satisfied users in Slovenia and around the world are enough proof of reliability, right?

H A R M O N Y

The background features a light blue and white color scheme with several semi-transparent gears of various sizes. A hand holding a pen is visible on the right side, appearing to interact with the gears. In the upper right corner, there is a list of business terms: 'Brand', 'Reputation', 'CRM', and 'Quality'. A large white letter 'B' is partially visible on the right edge. The overall theme is technology and business operations.

The BIM tool enables the preparation of an intelligent virtual model of a building and premises and helps architects and designers throughout the entire project preparation process (planning, construction, operation and maintenance).

It can also be used for creating project documentation or researching design possibilities and creating visualizations, with the help of which the users are able to visualize what a building or room will look like.

The appropriate Fluidmaster product files can easily be integrated in the 3D design, because they are created in the Autodesk Revit software.

FUTURE

Confidence in our products is also reflected in the success of cooperation in various projects.
Fluidmaster products are built into:

- numerous housing estates;
- business-residential and sports facilities;
- hotels, apartments and hotel annexes;
- kindergartens, schools, dormitories and libraries;
- homes and apartments for the elderly;
- hospitals and other medical institutions.
